

At Adelaide and Parafield Airports we are committed to managing our business operations and activities in an environmentally responsible manner with an emphasis on environment protection and environmental risk management.

To deliver on these commitments Adelaide and Parafield Airports will:

- Comply with applicable environmental laws and regulatory requirements.
- Establish and publish objectives for continuous improvement within our publicly available Masterplan. Monitor, audit and report on environmental performance against set objectives.
- Implement and maintain an Environment Management System to minimise the impact of our operations on air quality, noise, soil, groundwater and surface water.
- Ensure our staff have the skills and resources to comply with this policy.
- Ensure that areas of significant environmental risk, such as changing land use, community impact and the use and handling of hazardous materials are appropriately managed.
- Mitigate any environmental harm caused by our operations.

Protection of the environment is both an individual and shared responsibility. All staff and contractors have a responsibility to protect the environment from potential risks and impacts associated with Airport operations.
